

Bat-Caddy

A Good Walk That's Never Spoiled

Electric Golf Cart

The golf world is saturated with technology. Three-piece golf balls, tungsten-weighted drivers, and hybrid clubs that look like they were funded by NASA are everywhere, but there's no guarantee that any of them will help you. That draw-inducing driver won't matter if you top your tee shot, just like your putter with a polymer face insert won't make much of a difference if you can't get on the green. For those of you that are frustrated by technology that doesn't live up to the hype, say hello to the Bat-Caddy, a product that proves that technology can help golfers every time they play.

Bat-Caddy is an electric golf cart that makes walking the course fun again. Golfers can forget the days of lugging their bags on their backs as they went from shot to shot, because Bat-Caddy does the work for you. And forget riding in a cart—you may as well be home watching the pros from your couch! Walking the course with Bat-Caddy allows you to experience the health and fitness benefits of walking while eliminating the stress and strain that carrying your clubs puts on your shoulders and back. Golfers will walk away from the course after a round with Bat-Caddy feeling more refreshed and energized than ever before.

Currently available in two models, the X2 Pro and the X3R, Bat-Caddy is a sleek, stylish way to transport your golf bag around the course. Both Bat-Caddy models are made from a high-quality silver aluminum

frame and durable, airless wheels, and they come with a full one-year

factory warranty. Each model is capable of carrying over 65 pounds, and the easy-to-charge battery lasts for at least 27 holes, so unless you plan on entering a golfing marathon, you'll never have to play without your Bat-Caddy by your side.

Bat-Caddy is the next best thing to having a real caddy. Each model comes with a scorecard holder, cup holder, umbrella holder, and rain cover, and each is exceedingly simple to use. The X2 Pro features a manual seamless Rheostat Control with cruise control ability, and the X3R is operated by remote control. Both models stand up to any weather condition, and they fit easily into the trunk of any car. Even when running at full speed, Bat-Caddy is soundless, so you'll never have to worry about distracting your partner during his backswing.

Golfers aren't the only ones that stand to benefit by using Bat-Caddy. Golf courses can consider stocking a fleet of Bat-Caddies to take advantage of the current trend towards fitness-consciousness that the country is experiencing. At just a fraction of the price of the typical motorized cart, Bat-Caddy delivers a fresh experience that is sure to get people talking. Bat-Caddy reduces the wear and tear on a golf course and speeds up play over both motorized carts, which often have to stay on cartpaths or adhere to the 90-degree rule, and walking, which can be cumbersome with a bag slung over your back.

Golf is being used more than ever by those who enjoy it as a fitness tool. Walking one 18-hole round of golf is equivalent to walking over four miles, making it a great way to get healthy while having fun. Bat-Caddy helps golfers physically get the most out of their time on the course, and it's cheaper over the long haul than renting a cart each time. Bat-Caddy is a great idea for the golfer that wants to play golf the way it was meant to be played, and it's a practical conversation piece that is easy to transport and use. A good walk spoiled? It's too bad Mark Twain didn't have a Bat-Caddy.
